Facebook Compromise Cleanup

Compiled by the Clinic to End Tech Abuse

Last Updated: July 2, 2020

Who is this guide for?
Anyone who suspects or knows that someone else has gotten access to their Facebook account.

What does it cover?
- Checking whether someone else might have logged into your Facebook account recently
- Making sure the recovery email and phone number for your account belong to you
- Checking what information you are sharing publicly
- Making a Facebook account more secure

This guide does not cover Facebook Messenger.

Before we start:
- If someone else is getting access to your account, they may know right away if you turn on two-factor authentication (extra security) or change other account settings. If the person is violent or threatening, losing access to your account may cause them to become more dangerous. We strongly recommend that you talk to a domestic violence or other appropriate organization to make plans for your safety before you make any changes to your account if you are worried about an increase in violence or other harm.
- We have marked changes that could be visible to an abuser with the following sign:

Be careful!
This action could be visible to the abuser
Step 1 - Log into your Facebook Account

Log into your Facebook account at https://www.facebook.com:

After logging in, you should see a webpage that looks like the following:
Step 2 - Go to Settings

Click on the **downward triangle** at the top right corner of the screen, and you will see a menu that looks like this:

![Menu](image)

Then click on **Settings & Privacy**. You will see something like this:
Now, click on **Settings**. You will see the following page:
Step 3 - Check for Recent Logins

Click on Security and Login on the menu at the left hand side. You will be able to see a page like this:

Look for the Where You're Logged In panel. In that panel, click on See More to see all the devices where someone is logged into your account.
Each session you will see corresponds to a login to your account, and contains information about the device where someone signed into your Facebook account, the last time when that device logged in, and the browser or app that was used for the activity. (A browser is the program you use to visit websites. Examples include Chrome, Safari, Firefox, and Edge.)

In the See More window, you can check for more details about a specific login. To do this, click on the dots at the very right of the panel and click on Not You?

A popup window will appear:

If it wasn't you who logged in, we can take you through a few steps to secure your account.

about 2 weeks ago
[?]  Samsung Galaxy J3 Luna Pro

If you want to log this device out of your Facebook account -- for example, if you think the device belongs to the abuser or someone else other than you --, you can do this by clicking on the dots at the very right of the panel and then clicking on Log Out:
If the abuser is logged into your account and you log them out, they could realize this immediately. You may want to talk to your caseworker or a domestic violence organization to make plans for your safety before taking this step.

**Step 4 - Secure Your Account**
If you click on **Secure Account**, you will see something like this:

If you click on **Get Started**, Facebook will start a scan to detect any recent changes to your Facebook account:
After a few seconds, Facebook will recommend that you check some specific aspects of your Facebook account. You might see something like this:

**Keep Your Account Secure**
It looks like one change was made to your account. Now we’ll help you change your password and look at the recent change to your account.

1. Password
2. Review your email address(es)

Click on **Continue**. In the next window, you can change your password:
After entering the information and clicking on Continue, you might see something like this:

![Image of a form asking if there are any email addresses that you don't recognize.]

You will see all the email addresses that are linked to your Facebook account. The date when the email addresses were added to your Facebook account will also be shown. If there is an email address you do not recognize, you can select it using the checkbox and then click on the Delete button to remove it:

![Image of a form asking if there are any email addresses that you don't recognize with a checkbox selected.]

Facebook might suggest other steps depending on the recent activity of your Facebook account. Here are some examples of what you might see:
Keep Your Account Secure
It looks like some changes were made to your account. Now we'll help you change your password, look at the recent changes to your account, and turn on extra security.

1. Password
2. Review your email address(es)
3. Select your username
4. Pages you liked or followed
5. People you added or followed
6. Posts

Continue

After you review all of the recommended aspects of your account, you will see something like this:

All Done!
Thanks for taking the time to secure your account.

☑ Password
☑ Review your email address(es)

Go to News Feed

Step 5 - Check Recovery Email Address and Phone Number

Be careful!
This action could be visible to the abuser

Often, abusers will change the recovery email address and/or phone number for your account to theirs, so they can keep access to the account.
Click on the **downward triangle** at the top right corner of the screen:

![Downward triangle icon](image)

Then click on **Settings & Privacy**. You will see something like this:

![Settings & Privacy](image)

Click on **Settings**. You will see the following page:
Now, click on **Contact** in the General Account Settings panel:
Check that the emails and phone numbers you see are safe ones. If any of these are controlled by your abuser, then that person could regain control over your Facebook account even if they do not know your password.

To fully recover your Facebook account, make sure you only use a safe email and/or safe phone number.

**Step 6 - Do the Privacy Checkup**

Click on the **downward triangle** at the top right corner of the screen:

Then click on **Settings & Privacy**. You will see something like this:
Click on **Privacy Checkup**. The following screen will appear:

Facebook will show you some different ways to review your privacy and security settings. We recommend you to have a look at all of the options shown.
Be careful!

This action could be visible to the abuser

For example, if you click on **Who can see what you share**, the following will appear:

Click on **Continue**. The following box will appear:
On this screen, you can change who can see your email and birthday. If you want to move on, click on **Next**. The following box will appear:

![Posts and Stories](image)

On this screen, you can change who can see your future posts and stories. Additionally, you can change who can see your past posts. When you want to move on, click on **Next**. The following box will appear:

![Blocking](image)

On this screen, you can add someone to your “Blocked List.” If you block someone, that person will not be able to see what you post, they will not be able to tag you, nor invite you to events and groups, start a conversation or add you to their friends list.
To move on, click on **Next**. The following box will appear:

![You're All Set](image)

If you click on **Review Another Topic**, you will be taken to the main page for Facebook’s privacy checkup main page.

Finally, we also recommend you to turn on two-factor authentication to strengthen your account security. You can view our guide to turning on two-factor authentication for Facebook by clicking here: [https://82beb9a6-b7db-490a-88be-9f149bafe221.filesusr.com/ugd/c4e6d5_01e4e6e33987443ea22afcd7880706.pdf](https://82beb9a6-b7db-490a-88be-9f149bafe221.filesusr.com/ugd/c4e6d5_01e4e6e33987443ea22afcd7880706.pdf)

You can also find our guide by going to [https://www.ceta.tech.cornell.edu/resources](https://www.ceta.tech.cornell.edu/resources).

Two-factor authentication is an extra security step that can help keep your account safe and private even if somebody else knows or guesses your password.
